                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC The present sequence encodes a Borrelia garinii IP90 protein. The CC present invention describes an isolated nucleic acid (I) that: (i) CC encodes a polypeptide fragment (II) immunologically reactive with CC rabbit polyclonal antibody raised against a 13 kDa polypeptide of CC Borrelia burgdorferi B313, but not reactive with most proteins from CC other spirochaetes; and/or (ii) hybridizes under stringent conditions CC to specific nucleic acid sequences but not to genomic DNA from most CC to ther spirochaetes. (I), (II) and transformed cells are useful in CC vaccines to protect against infection by B. burgdorferi sensu lato. CC (I), (II) and antibodies raised against (II) are used to diagnose such in standard immunoassays or amplification/hybridization tests. (I) are also used to produce recombinant (II). The 13 kD protein is involved in virulence and is highly conserved within B. burgdorferi Sensu lato, but is absent from other Borrelia species (e.g. those cresponsible for relapsing fever or avain borrelosis). It should provide a more specific and sensitive antibody response, and diagnosis, compared with use of whole bacteria as antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Вр
                    The present sequence encodes a Borrelia afzelii ACAI protein. The CC present invention describes an isolated nucleic acid (I) that: (i) CC encodes a polypeptide fragment (II) immunologically reactive with CC rabbit polyclonal antibody raised against a 13 KDa polypeptide of CC Borrelia burgdorferi B313, but not reactive with most proteins from CC other spirochaetes; and/or (ii) hybridizes under stringent conditions CC to specific nucleic acid sequences but not to genomic DNA from most CC to ther spirochaetes. (I), (II) and transformed cells are useful in CC vaccines to protect against infection by B. burgdorferi sensu lato. CC (I), (II) and antibodies raised against (II) are used to diagnose such CC infections, in standard immunoassays or amplification/hybridization CC tests. (I) are also used to produce recombinant (II). The 13 kD protein CC is involved in virulence and is highly conserved within B. burgdorferi CC sensu lato, but is absent from other Borrelia species (e.g. those CC responsible for relapsing fever or avain borrelosis). It should provide CC a more specific and sensitive antibody response, and diagnosis, CC compared with use of whole bacteria as antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC present invention describes an isolated nucleic acid (1) that: (1) ce encodes a polypeptide fragment (II) immunologically reactive with CC rabbit polyclonal antibody raised against a 13 kDa polypeptide of CC Borrella burgdorferi B313, but not reactive with most proteins from CC other spirochaetes; and/or (ii) hybridizes under stringent conditions CC to specific nucleic acid sequences but not to genomic DNA from most CC to specific nucleic acid sequences but not to genomic DNA from most CC to specific nucleic against infection by B. burgdorferi sensu lato. CC (I), (II) and antibodies raised against (II) are used to diagnose such CC (I), (II) and antibodies raised against (II) are used to diagnose such CC (I), (II) are also used to produce recombinant (II). The 13 kD protein is involved in virulence and is highly conserved within B. burgdorferi CC sensu lato, but is absent from other Borrella species (e.g. those CC a more specific and sensitive antibody response, and diagnosis, CC compared with use of whole bacteria as antigen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (HUMA-)
                                         This sequence encodes a Borrelia burgdorferi (Bb) protein of the invention, which is suitable for use in a vaccine. The Bb polypeptides can be used in vaccines for eliciting protective antibodies to members the Borrelia genus, particularly for the use against Lyme disease in humans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can albe used for detection of members of the Borrelia genus.
                                                                                                                                                                                                                                                                                                 New isolated Borrelia burgdorferi nucleic acids - used products for the diagnosis, prevention and treatment of caused by Borrelia, particularly Lyme disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAX61505

The Bb polypeptides can be used in vaccines for eliciting protective antibodies to members the Borrelia genus, particularly for the use against Lyme disease in humans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can all be used for detection of members of the Borrelia genus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAX20248 to AAX20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borrellosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated Borrelia burgdorferi nucleic acids - used to products for the detection, diagnosis, characterisation, and therapy of infections, particularly Lyme disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ( HUMA - )

                                                                                                                                                                                                                                                     AAX20248 to AAX20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            03-SEP-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAX20248 to AAX20402 represent polynucleotide sequences isolated from Borrella burgdorferi (BD). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of blosynthetic products, e.g. enzymes. Borrella belongs to a family of motile, spiral-shaped bacteria called Spirochetes to a repathogenic in humans and Borrelia causes epidemic and

                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and oncogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequen (Ss) and sequences complementary to (Ss). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation st and/or single nucleotide polymorphisms and also to be used in an array for analysing diseases associated with Cpc dinucleotides e.g. cancers and tumours. The probes can also be used in a method for
                                                                  Note: The sequence value of the printed specification, of the printed specification, of the directly from WIPO at format directly from WIPO at
                                                                                                                                                                                                 differences serving as basis for diagnosis and/or prognosis events are disadvantageous to patients. The present sequence is one of the 533 genomic sequences derived from tumour suppressor genes and
                                                                                                                                                                                                                                                                                         diseases, by analysing cytosine methylations. The parameters may compared to another set of genetic and/or epigenetic parameters,
                                                                                                                                                                                                                                                                                                                                               ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1792
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1672
The invention relates to a nucleic acid comprising a sequence of at least 18 bases of a segment of chemically pretreated DNA of genes associated with cell signalling. The activity of the modified sequences of the invention may be described as cytostatic. The object of the invention is to provide the chemically modified DNA of genes associated with cell signalling, as well as oligonucleotides and/or pNA-oligomers for detecting cytosine methylations, as well as a method which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01ek
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chemically treated
